

Every healthcare organization that utilizes MEDITECH has unique reporting needs that typically exceed the requirements of the standard NPR reports that MEDITECH delivers. Healthcare Informatics Associates (HIA) has the expertise to develop and deploy advanced NPR reporting solutions that cater to your specific needs.

Whether it is training your staff on NPR basic and advanced report writing techniques or creating specialized reports for you, HIA has the expertise to help you optimize application performance using the NPR Report Writer tool. HIA consultants have years of MEDITECH experience creating sophisticated reports that have streamlined workflow, enhanced end-user experience and optimized performance.

HIA can provide NPR report writing consultants that:

- Display or hide (customize) report output based on user run-time selection
- Pull information from multiple applications using macros and fragments
- Customize and create a report based on a client's requests
- Build advanced reports that your organization does not have the knowledge, time or bandwidth to complete
- Create reports to automatically download or FTP

- Build reports to meet third party specifications
- Create custom sort and selection values and default run-time variables
- Provide Comma Delimited and XML formats for reports that are ready for download and export
- Sort and select records based on "hardcoded" or user-defined values

HIA consultants can use advanced report writing techniques and their years of experience to create even your most difficult NPR reports.

HIA can provide the necessary staffing resources on a full or part time basis to assist you in developing high quality MEDITECH NPR Reports.
